

2011 Q3.

(a)

(i)

$$s_x = u_x t$$

$$= 35 \cos \alpha t$$

$$= 35 \cdot \frac{1}{\sqrt{5}} t$$

$$\Rightarrow x = 7\sqrt{5} t$$

$$\Rightarrow t = \frac{x}{7\sqrt{5}}$$

$$s_y = u_y t - \frac{1}{2} g t^2$$

$$50 = 35 \sin \alpha t - \frac{1}{2} g t^2$$

$$\Rightarrow 50 = 35 \cdot \frac{2}{\sqrt{5}} \left(\frac{x}{7\sqrt{5}} \right) - 4.9 \left(\frac{x}{7\sqrt{5}} \right)^2$$

$$\Rightarrow 50 = 2x - 0.02x^2$$

$$\Rightarrow 0 = 2x^2 - 200x + 5000$$

$$\Rightarrow 0 = x^2 - 100x + 2500$$

$$\Rightarrow 0 = (x - 50)(x - 50)$$

$$\Rightarrow x = 50$$

(ii)

$$\underline{s_x}: \quad 35 \cos \alpha t = 50 \Rightarrow t = \frac{50}{35 \cos \alpha} = \frac{10}{7 \cos \alpha}$$

$$35 \sin \alpha t - \frac{1}{2} g t^2 = 50$$

$$\Rightarrow 35 \cdot \sin \alpha \left(\frac{10}{7 \cos \alpha} \right) - \frac{1}{2} g \left(\frac{10}{7 \cos \alpha} \right)^2 = 50$$

$$\Rightarrow 50 \frac{\sin \alpha}{\cos \alpha} - \frac{10}{\cos^2 \alpha} = 50$$

$$\Rightarrow 50 \tan \alpha - 10(1 + \tan^2 \alpha) = 50$$

$$\Rightarrow 50 \tan \alpha - 10 - 10 \tan^2 \alpha = 50$$

$$\Rightarrow \tan^2 \alpha - 5 \tan \alpha + 6 = 0$$

$$\Rightarrow (\tan \alpha - 2)(\tan \alpha - 3) = 0$$

$$\Rightarrow \tan \alpha = 2 \text{ or } 3$$

$$\tan^{-1} 3 = 71.6^\circ \quad \left[\text{We were given } \tan^{-1} 2 \right]$$

Note:

$$\tan^2 \theta + 1 = \sec^2 \theta$$

(b)

(i)

$$s_x = u \sin 45^\circ t - \frac{1}{2} g \cos \alpha t^2 = 0$$

$$\Rightarrow t(u \sin 45^\circ - 4.9 \cos \alpha t) = 0$$

$$\Rightarrow t=0 \text{ or } 10 \cdot \frac{1}{\sqrt{2}} - \frac{1}{2} g \cos \alpha t = 0$$

$$\Rightarrow t = \frac{10 \cdot 2}{\sqrt{2} g \cos \alpha}$$

$$\Rightarrow t = \frac{10\sqrt{2}}{g \cos \alpha}$$

$$V_x = 10 \cos 45^\circ + g \sin \alpha t$$

$$V_x = \frac{10}{\sqrt{2}} + g \sin \alpha \left(\frac{10\sqrt{2}}{g \cos \alpha} \right)$$

$$V_x = 5\sqrt{2} + 10\sqrt{2} \tan \alpha$$

$$V_y = 10 \sin 45^\circ - g \cos \alpha \left(\frac{10\sqrt{2}}{g \cos \alpha} \right)$$

$$= 5\sqrt{2} - 10\sqrt{2}$$

$$= -5\sqrt{2}$$

$$\tan \theta = \frac{-V_y}{V_x}$$

$$\Rightarrow \frac{1}{4} = \frac{5\sqrt{2}}{5\sqrt{2} + 10\sqrt{2} \tan \alpha}$$

$$\Rightarrow 5\sqrt{2} + 10\sqrt{2} \tan \alpha = 20\sqrt{2}$$

$$\Rightarrow \tan \alpha = \frac{15\sqrt{2}}{10\sqrt{2}}$$

$$\Rightarrow \tan \alpha = \frac{3}{2}$$

$$\Rightarrow \alpha = 56.3^\circ$$

$$\begin{aligned} \text{(ii) } V_y &= -5\sqrt{2} & V_x &= 5\sqrt{2} + 10\sqrt{2} \tan \alpha \\ & & &= 5\sqrt{2} + 10\sqrt{2} \cdot \frac{3}{2} \\ & & &= 20\sqrt{2} \end{aligned}$$

$$\Rightarrow 5\sqrt{33} = \sqrt{(-5\sqrt{2})^2 + (20\sqrt{2})^2}$$

$$\Rightarrow 5\sqrt{33} = \sqrt{50e^2 + 800}$$

$$\Rightarrow 825 = 50e^2 + 800$$

$$\Rightarrow 25 = 50e^2$$

$$\Rightarrow \frac{1}{2} = e^2$$

$$\Rightarrow \frac{1}{\sqrt{2}} = e$$
